Boston, USA | Belgrade, Serbia  
+1 (617) 775-9686 | +381 677 627 699  
a@ivkin.dev  
<https://portfolio.ivkin.dev>

CTO and software engineer with 15+ years' experience building full-stack web and mobile applications, as well as AI-powered products. Proven ability to lead cross-functional teams, drive product roadmaps, and deploy production-grade solutions. Experienced in designing complex UI/UX and building high-performance frontend components.

## Career summary

January 2024 - now

**Enabled Health Inc** - *Co-founder, CTO*

AI physical therapy trainer for hospitals. Won MA challenge grant. Raised \$200k of funding. Launched two hospital pilots.

- Built and launched an iOS bedside trainer app integrating computer vision-based engagement tracking and exercise guidance for hospitalized patients;
- Created UI/UX and build clinical web-dashboard showing metrics and patient progress realtime;
- Led R&D of new computer vision algorithms for body-pose estimation and motion tracking;
- Developed an AI voice agent talking to patients
- Manage a mixed remote and on-site team of engineers, UX and motion designers, and data analysts; conduct direct hospital staff and patient interviews to validate features.

April 2021 - July 2025

**Ace Trace app** - *Founder*

Launched a mobile sports video editor app for iOS and Android. 6000 paid customers on a subscription model. AppStore rating of 4.4 stars with more than 1.1K reviews. Exited the company through the app acquisition.

- Created and maintained a custom computer vision model that traces golf-ball flight in video; adapted ML algorithms to run efficiently on mobile devices;
- Designed effective UI/UX for a feature-rich video editing application;
- Automated marketing partnership outreach by developing an AI agent for Instagram;
- Produced and edit marketing videos using generative AI tools (Veo, Kling, Runway, Sora);
- Conducted product research, user interviews, and roadmap prioritization; hired and managed freelance engineers and interns.

April 2015 – March 2022

**ALM Works, Inc.** - *Leading Software Developer*

Lead the development of Structure.Gantt (5k+ installations) to support working on-premises and cloud version of it. Set up a new development process for the teams. Made a significant contribution to the Structure product (7K+ installations)

Researched and shipped an MVP of a new product, "Cross-Team PI Planner" as part of the Structure Innovations team.

- Research new ideas and building prototypes and production code (full stack)
- Designing user interfaces
- Architectural design discussions and code reviews
- Conduct customer interviews, analyzing the feedback, creating a roadmap for the product

- Managing a project as a team lead, communicating with other teams, negotiating the workload
- Serving as an escalation point for technical support in case of complicated issues with the products
- Presenting company products at corporate events
- Interviewing candidates for software developer positions
- Mentoring new software developers

May 2013 – Jan 2016

**Moscow Institute of Physics and Technology** - *Leading Software Developer (Part-Time)*

Created a video simulator and a test system for video stabilization algorithm assessment.

Researched and prototyped computer vision algorithms for object tracking in the video prior.

- R&D computer vision detection and tracking algorithms
- Analyzing the product requirements, planning a project roadmap
- Organizing agile-based work process
- Creating desktop and web application
- UI/UX

May 2012 – March 2015

**OpenWay Group** - *Software Developer*

Participated in web, mobile, kiosk, and ATM banking projects. Developed a new configuration management system from scratch, allowing the banking software to customize interactive screens.

- Analyzing the product requirements
- Writing program code (full stack)
- Investigating and solving technical problems of customers
- Performance optimizations

September 2009 — May 2013

**InviewLab** - *Leading Software Developer (Part-Time)*

Created from scratch, the spectral recognition software - a part of a device for sample material analysis.

Reached the final in the Skolkovo Innovation Award 2011.

- Research of existing algorithms for spectral recognition and signal processing
- Analyzing the product requirements
- Planning a project roadmap
- Organizing agile-based work process
- Writing program code
- Writing documentation
- Designing a user interface for the software

August 2009 — May 2012

**OpenWay Group** - *Quality Engineer*

Developed a testing framework for creating and executing automated tests for the banking software. As a Payment System Interchange team leader, I covered most functionality with automated tests. Designed from scratch a testing strategy for the Mastercard Russian Switch project.

- Writing and review of testing documentation, project requirements analysis
- Designing testing strategies, planning of test cycles
- Automated test development and maintenance
- Development of testing frameworks and tools

December 2007 — July 2009

**Sun Microsystems (Oracle)** - *Quality Engineer*

Took part in the Java Device Test Suite project. Created automated web reports for preparing for a release and monitoring team performance. Created a web application for the documentation review process.

- Testing documentation
- Automated test development and maintenance
- Executing manual and automatic tests
- Development of internal web tools

## Education

### **2013 - 2015 Moscow Institute of Physics and Technology**

Unfinished Ph.D. in Computer Science. (I quit because I didn't want to write science papers - I wanted to build things)

### **2007 - 2009 St.Petersburg State Electrotechnical University**

Master's degree in Electronics and Microelectronics.

### **2003 - 2007 St.Petersburg State Electrotechnical University**

Bachelor's degree in Electronics and Microelectronics.

## Technical skills

- Java, Kotlin, Python
- Typescript, Javascript, React, Redux, NodeJS
- Flutter, React Native, Swift, SwiftUI, Jetpack Compose
- Docker, Kubernetes, MongoDB
- Machine Learning - research and development of new models for computer vision
- Generative AI - building multi agent systems, voice agents, image and video generation

## Personal features

- Technology early adopter and enthusiast;
- Creative;
- Self-motivated;
- Responsible attitude to work;
- Team worker;
- Own my work.
